

#### REMARKS

Applicant gratefully acknowledges that the examiner has indicated that claims 20, 22, 26, 32 and 33 contain allowable subject matter.

Claims 19, 21, 24, 25, 27-31 and 34-36 stand rejected under 35 USC 102 over Kärkkäinen et al. In connection with this rejection, the examiner argues that Kärkkäinen et al illustrates that the element 21 moves relative to the element 19.

Applicant wishes to thank the examiner for the courtesy extended to the undersigned representative during the telephone interview that took place on March 19, 2008. During the telephone interview, the examiner and the undersigned discussed the limitation in claim 19 regarding the stop member being movable relative to the auxiliary bolt. The undersigned suggested that this wording means that movement of the auxiliary bolt is not necessarily accompanied by movement of the stop member whereas the examiner suggested that this wording covers the possibility that the stop member is rigidly attached to the auxiliary bolt, so that when the auxiliary bolt moves, the stop member must also move. No agreement was reached regarding the appropriate meaning of the wording.

Applicant remains of the opinion that the examiner's interpretation of "movable relative to" is incorrect. Nevertheless, in order to expedite examination and allowance of this application, applicant has amended claim 19 to include the features of claim 20 and has amended claim 29 to include the feature of claim 33. Applicant has rewritten claims 22, 26 and 32 in independent form.

In view of the foregoing, applicant submits that claims 19, 22, 26, 29 and 32 are patentable. It follows that the dependent claims also are patentable. By amending the claims in the manner discussed above, applicant is not abandoning the subject matter of claims 19 and

29 as previously presented and reserves the right to file one or more continuing applications with respect to that subject matter.

Respectfully submitted,

---
